Adobe's Creative Cloud (CC) suite of products is probably the most common and well-known of all the software applications that are used to make a living by running websites. The suite has a few different products, including the Creative Cloud Photography (CCP) suite, the Creative Cloud Design Suite (CCD), and the Creative Cloud Video (CCV) suite.

Adobe's education-focused offerings are also rolled up into one complete suite of Creative Cloud applications (CC). These include Photoshop Portfolio, which allows you to keep all the tools you're most skilled in handy and separate brushes, Adobe Stock, and Adobe Lightroom. Adobe has also freshened up all the software in the Creative Suite (CS), including a new version of Lightroom. The video editing side of things comes with Premiere Pro CS5.5, and with that comes the ability to export your videos to all sorts of popular web destinations, including YouTube. You can even make your own HTML5 movies on the fly. For further information on Photoshop CC, check out our thorough review on the MacLife website. We've also got a more in-depth in-depth review of the product in the October issue of the iPhone Life magazine. After a full year of development, the big update that Photoshop Creative Cloud users waited for has

finally arrived. Version 2018 brings a slew of significant updates, all aimed at making the Creative Cloud version of the CS software smoother, more reliable and, finally, faster.

Clearly, Photoshop is a tool that has a lot going for it, and working with raw files is just a small part of that. To see just how well the app handles the other parts of the workflow, we've put this recent, albeit not the newest version of Photoshop on our test platform supercomputer running the latest version of Windows, Catalyst 15.11.
