It is a powerful, fully integrated, comfortable and easy to use professional grade photo editing software that is capable of greatly enhancing your photo's image quality from the smallest details or lightens or darkens only part of an image or is just a little brush correction. I used photoshop for my entire career in advertising, print, and illustration-but after wading through the huge mess that is the Adobe Photoshop Creative Cloud application that Adobe is forcing on the public, I have bailed and am now enjoying the work I do with Lightroom (my main photo editing app). The editing suite from Adobe Photoshop has been a professional market leader for a long time and provides almost unlimited possibilities in terms of retouching images. Although it may be a bit more difficult to make your first steps into this software, the possibilities are much higher than those you get with other tools. They are the best out there. Software that has over 150 years of lightroom and photoshop behind it is hard to beat. 60,000,000 apps and 10,000,000 updates just to make it better. When you upgrade, just make sure you have at least 1 gb. I just make a handy drive about 4 times a year and move it from laptop to laptop every time! I'm happy to say that Lr 6 is a great upgrade for me. I use it as my main editing app. I use it on the computers in our family, on my iPhone (since I have no physical copy of it currently, I use my phone directly and in my opinion it's the best use of phone editing apps), and I use it on a Mac laptop at work.
